

**I wish someone gave
me these 50 React
questions earlier....**

**Swipe now — before
you regret skipping
it.**

Q 1. What is React?

Ans: React is an open-source JavaScript library for building user interfaces or UI components, developed by Facebook.

Q 2. Explain JSX

Ans: JSX (JavaScript XML) is a syntax extension for JavaScript recommended by React for describing what the UI should look like.

Q 3. What is the virtual DOM?

Ans: The virtual DOM is a lightweight copy of the actual DOM in memory. React uses it to improve performance by updating only the changed parts of the actual DOM.

Q 4. What is the significance of keys in React?

Ans: Keys are used to uniquely identify and differentiate between components in React. They help React identify which items have changed, added, or removed.

Q 5. What are state and props in React?

Ans: State is an internal data store that belongs to a specific component, and it can be changed over time. Props are properties passed to a component from its parent, and they are immutable.

Q 6. What is the difference between state and props?

Ans: State is internal to a component and can be changed over time, while props are external and passed to a component.

Q 7. Explain the concept of lifting state up.

Ans: Lifting state up is a pattern where the state of a child component is moved to its parent component, allowing multiple child components to share the same state.

Q 8. What is the purpose of setState in React?

Ans: setState is used to update the state of a component and trigger a re-render.
